Discover the 4K difference

4K in a dashcam is not a gimmick. It is a game-changer.

It is not about playing videos on a giant screen—although you could do that too. It's about providing video proof.

A dashcam is only as good as its ability to capture crucial details—usually license plate numbers.

The 8-megapixel 4K UHD sensor does just that by capturing 4 times as many pixels as in Full HD.

And with its fast shutter speed, details are frozen in place.

Just pause and zoom in.

Capture everything front and rear

Front camera: 8 megapixels CMOS sensor recording in 4K Ultra High Definition (3840×2160) at 30FPS.

Rear camera: 2.1 megapixels Sony STARVIS™ recording in Full HD (1920×1080) at 30FPS.

The front camera's ultra-wide 162-degree angle takes full advantage of the 4K UHD resolution. The rear camera records in Full HD at a 139-degree angle with outstanding low-light sensitivity.

Native Parking Mode with built-in voltage monitor to protect your vehicle battery (hardwiring cable included).

With the free BlackVue Cloud service, check on your car from anywhere, anytime.
